

Answering System 1316

Owner's Manual

Foldout Diagram:

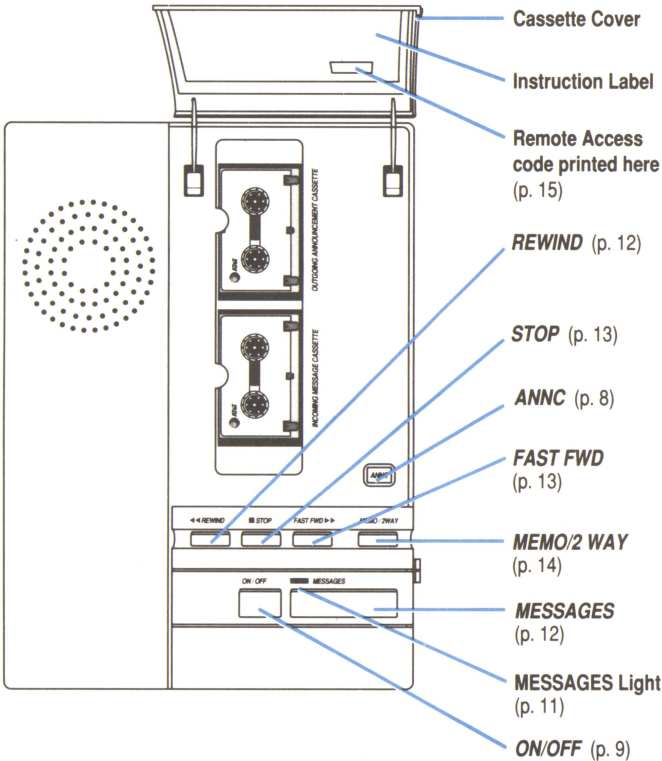

This manual includes a foldout diagram inside the front cover. The diagram identifies the functions of the Answering System 1316, and shows the page numbers where you can find information on each function. We recommend that you unfold the cover so that it is visible for easy reference as you read the manual.

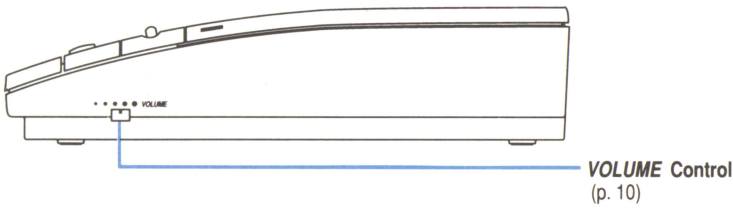

This symbol appears on your unit to alert you to operating or servicing instructions found in your owner's manual. As you read this manual, look for the symbol. It appears to the left of these important instructions.

Important Safety Information

Always follow basic safety precautions when using this product to reduce risk of injury, fire, or electric shock.

- 1 Read and understand all instructions** in the owner's manual.
- 2 Observe all warnings and instructions marked on the product.**
- 3 Unplug this product from wall outlets and telephone jacks before cleaning.** Clean exposed parts with a soft, damp cloth. Do not use liquid or aerosol cleaners.
- 4 Do not use the product near water, or when you are wet.** For example, do not use it in a wet basement or near a swimming pool, bathtub, shower, kitchen sink, wash bowl, or laundry tub. If the product comes in contact with any liquids, unplug the power and line cords immediately. Do not plug the product back in until it has been dried thoroughly.
- 5 Install this product securely on a stable surface.** Serious damage may result if the product falls.
- 6 Install this product in a protected location** where no one can step on or trip over the line cord. Do not place objects on the cord that may cause damage or abrasion.
- 7 If this product does not operate normally, see "In Case of Difficulty," on page 19.** If you cannot resolve the problem, or if the product is damaged, refer to the AT&T Limited Warranty on page 24. Opening the product or reassembling it incorrectly may expose you to dangerous voltages or other risks.
- 8 During thunderstorms, avoid using telephones except for cordless models.** There may be a slight chance of electric shock from lightning.
- 9 Do not use a telephone in the vicinity of a gas leak.** If you suspect a gas leak, report it immediately, but use a telephone away from the area where gas is leaking.

Important Safety Information *(continued)*

- 10 Use only the correct power source as marked on the product.** If you are not sure of the power supply to your home, consult your local power company. If the product uses a wall plug-in transformer, use only the transformer supplied.
- 11 If your wall outlet will not accept a polarized, two-prong plug,** reverse it and try again. If the plug has three prongs, it must be plugged into a grounded outlet with three holes. Such plugs are designed for your safety. Do not attempt to defeat this purpose. If you cannot insert the plug easily, your outlet should be replaced by an electrician.
- 12 Do not overload wall outlets and extension cords.** This can increase risk of fire or electric shock.

SAVE THESE INSTRUCTIONS

Introduction

Congratulations on the purchase of your new Answering System 1316. We suggest you read this owner's manual carefully to become familiar with the features and how they work. The manual explains in simple steps how to install, use, and care for your new answering system. For a brief overview of how to operate many of your system's features, refer to the Quick Reference on the last page of this manual.

At home, you can use your new system to:

- Answer calls and record messages when you cannot answer the telephone or do not want to be disturbed.
- Screen incoming calls.
- Record memos and telephone conversations.

While you are away, you can call home to:

- Listen to your messages.
- Leave a memo.
- Turn your answering system on or off.
- Change your announcement.

Quick reference materials:

In addition to this manual, the following materials are included for your quick reference:

- Quick Start Guide: A separate card with brief installation and operation instructions. You may use the card to get started or as a quick reminder after you become familiar with your answering system. Be sure to keep the card near your answering system.
- 2 Wallet Cards: Wallet-sized cards with instructions for accessing your answering system when you are away from home (remotely).
- Instruction Label: Label on the inside of the cassette cover which gives you brief operating instructions.

Parts Checklist

Make sure your answering system package includes the following items:

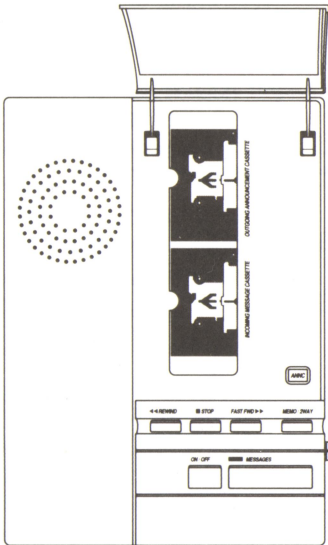

- AT&T Answering System 1316
- Power cord with AC transformer
- One 7-foot telephone line cord
- Two MC-60 microcassette tapes

Remember to save your sales receipt in case you ever need service.

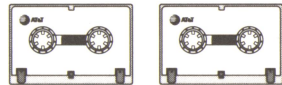

You must have both a modular telephone jack and a standard AC electrical outlet near the place you have chosen to install your answering system. If the telephone jack is more than 7 feet away, you will need a longer telephone line cord.

Do It Yourself and Save

AT&T offers a complete line of Do-It-Yourself products—including jacks, cords and adapters—to make any telephone wiring job quick, safe, and inexpensive. Ask for them where you purchased your answering system, or call 1 800 222-3111 for the name of a dealer near you.

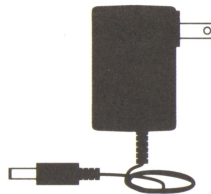

Answering System 1316

2 MC-60 Microcassette tapes

7-foot telephone line cord

Power cord with Transformer

Installation

Follow these steps to set your new answering system for proper operation. Figure 2 shows a properly installed system.

1 Insert the cassettes

Lift the cassette cover and insert the cassettes with the full reels to the back (Figure 1). The 2 cassettes are identical. Either can be used as the Announcement tape or the Message tape.

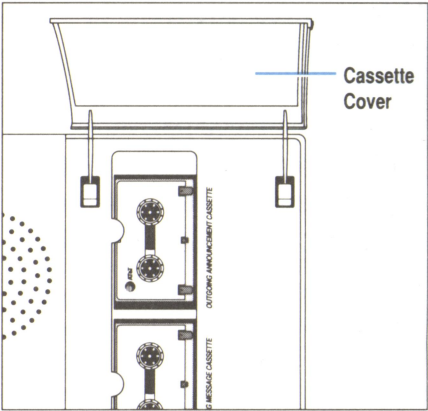

Figure 1

2 Connect the line cord

Plug one end of the telephone line cord into the TEL LINE jack, and plug the other end into a modular wall jack.

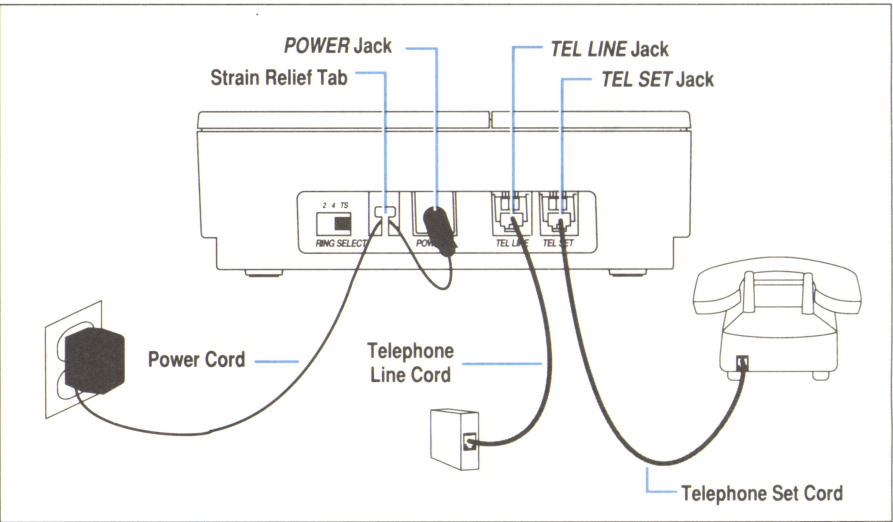

Figure 2

Installation (continued)

3 Connect your telephone to unit

(If you do not wish to connect a telephone to the system, go to Step 4.)

Plug your telephone set cord into the TEL SET jack at the rear of the unit.

4 Connect the power cord

Fit the power cord behind the strain relief tab on the back of the unit (Figure 2, page 6) and then plug the power cord into the answering system jack marked POWER.

You should use only the power cord supplied with your answering system.

If you need a replacement, call the AT&T National Sales and Service Center at 1 800 222-3111.

Plug the power cord into an electrical outlet not controlled by a wall switch. The cassettes will automatically rewind. The MESSAGES light will be on steadily while the tapes rewind. If this light is slowly blinking after the tapes stop moving, press and release **REWIND** (Figure 1).

NOTE: If you have not inserted the cassettes, you will hear 5 rapid beeps and the MESSAGES light will flash rapidly. Insert the cassettes and press and release **MESSAGES**.

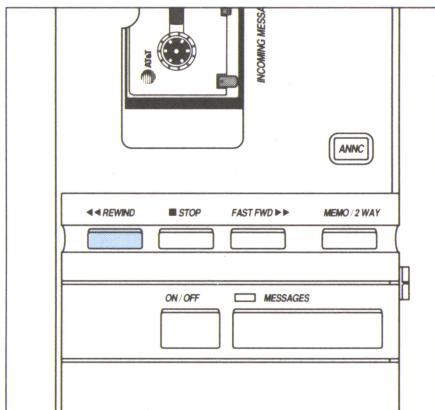

Figure 1

At Home Operation

Recording Your Announcement

Before using your new answering system, you should record an announcement. This is what callers will hear when the system answers a call. Your announcement may be up to 30 minutes long when an MC-60 microcassette tape is used.

1 Prepare your announcement.

Example: "Hello. I can't come to the phone right now. Please leave your name, telephone number, and a short message after the beep. I will return your call as soon as I can. Thank you."

2 Hold down **ANNC**, located under the cassette cover (Figure 1). Do not release **ANNC** until you have finished recording. The system will beep once to indicate that it is ready to record.

3 When the system beeps, speak toward the front of the unit in a normal tone of voice.

4 Release **ANNC** when you are finished. The tape will reset automatically.

NOTE: If you pause more than 4 seconds while recording, you will hear 5 rapid beeps and the system will stop recording. Wait for the tape to reset and record your announcement again.

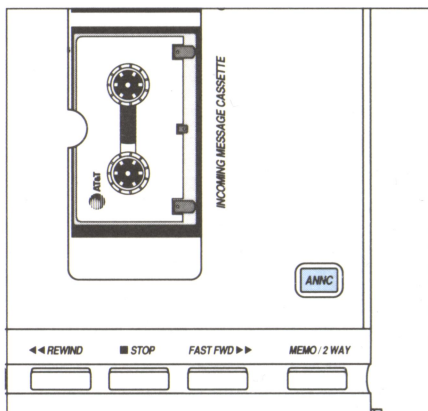

Figure 1

Playing Back Your Announcement

- 1 If the tape is resetting, wait for it to stop moving.
- 2 Set the VOLUME control (on the right side of the system) to the middle.
- 3 Tap (quickly press and release) **ANNC**.

NOTE: Be sure that you release the button quickly. If you hold it down for more than a second, your announcement will be erased.

To change your announcement

Follow Steps 1 – 4 under "Recording Your Announcement." Your new announcement will be recorded over the old one.

At Home Operation *(continued)*

Turning Your System On/Off

When the MESSAGES light is on (Figure 1) your system is ready to answer calls. To turn your system off, press and release **(ON/OFF)** so that the MESSAGES light is off.

NOTE: When your system is off, calls are answered after 10 rings so that you may turn on your system while you are away from home (see page 18).

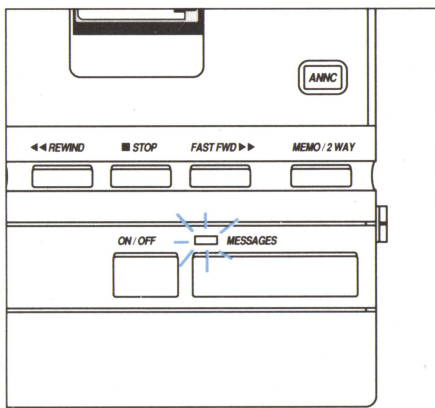

Figure 1

Automatic Answering Operation

When the system answers a call, the caller will hear the announcement you recorded, followed by a beep.

After the beep, the system begins recording your caller's message; it stops recording when the caller hangs up or when the caller is silent for more than 7 seconds.

To conserve space on the tape, messages are limited to a maximum of 4 minutes. If the caller is still speaking after 4 minutes, the system beeps once and hangs up.

About Microcassettes

An MC-60 microcassette can record approximately 30 minutes on each side.

When the tape has been filled, the MESSAGES light will flash rapidly to tell you that the tape is full. When this happens, you have 3 choices:

- play all of the messages and then clear the tape (see page 12)
- turn the tape over to record on the other side
- change the tape (see "Changing Microcassettes," page 22).

When the tape is completely full of messages, the unit cannot record a caller's message. The system answers after 10 rings and beeps twice, but it does not play an outgoing announcement or record the caller's message. See page 18, "When the Tape is Full."

At Home Operation *(continued)*

Volume Control

Use the VOLUME control (Figure 1) to adjust the sound level of your announcement and messages as they are heard through the system speaker. The VOLUME control does not affect the level of the announcement heard by the callers.

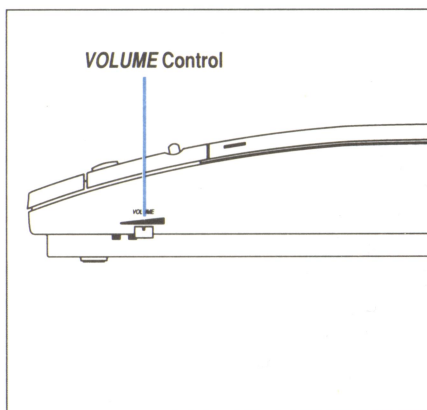

Figure 1

Ring Select

Set the RING SELECT switch (Figure 2) to 2, 4, or TS (TOLL SAVER) to choose the number of times the phone rings before the system answers.

- Set to 2 if you want the system to answer all calls on the second ring.
- Set to 4 if you want the system to answer all calls on the fourth ring.
- Set to TS (TOLL SAVER) if you want the system to answer calls on the second ring if you have messages, and on the fourth ring if you do not have messages.

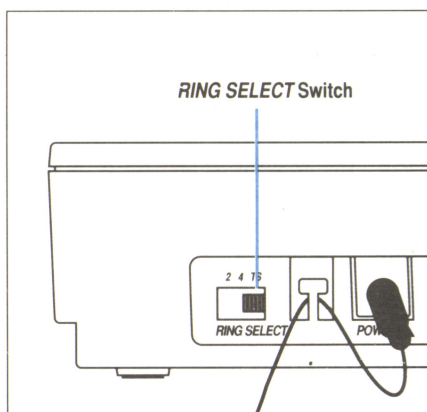

Figure 2

Toll Saver

Use the TS (TOLL SAVER) setting when you will be calling long distance or from a pay phone to check for messages. The system will answer after 2 rings only if you have messages waiting.

If there are no messages, the phone will ring at least 3 times before the system answers. You can then

hang up after the third ring to avoid paying for the call.

To use the Toll Saver feature, remember to move the RING SELECT switch (Figure 2) to the TS (TOLL SAVER) setting before leaving home.

At Home Operation *(continued)*

Messages Light

The MESSAGES light (Figure 1) tells you whether or not the system is on. It also tells you how many messages you have and if the system has a problem.

- **Off.** When the MESSAGES light is off, the system is off and will answer only after 10 rings. See page 18, "Turning Your System On/Off."
- **On steadily.** When the MESSAGES light is on steadily, the system is on and there are no messages. The system will answer calls according to the RING SELECT setting.
- **Blinking.** When the MESSAGES light blinks, there are messages on the tape. The light blinks once for each message, then pauses briefly. For example, if 5 messages are on the tape, the light blinks 5 times, pauses, then repeats.
- **Flashing.** When the MESSAGES light flashes rapidly, the system has a problem, such as a full, missing, or broken tape. The system will not record a caller's message until the problem is fixed.

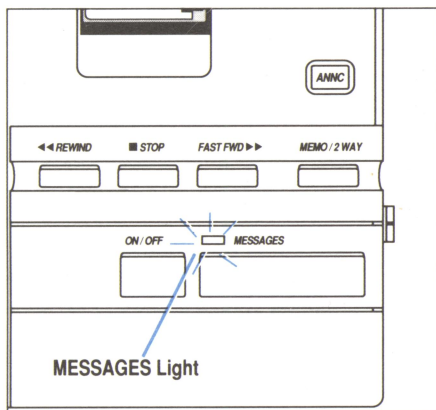

Figure 1

NOTE: The maximum message count is 25. If the unit records more than 25 messages or memos, all messages after the 25th will be treated as part of the last message.

At Home Operation (continued)

Listening to Your Messages

To play your messages, press and release **MESSAGES** (Figure 1). The system will beep once after each message and 5 times after the last message has been played.

The following options are available:

To Save Messages

After playing back all messages the system stops, beeps 5 times, and is then ready to answer calls. New messages will be recorded after the messages you've just heard.

To Clear Messages

After your system stops playing messages and you hear 5 beeps, press and release **REWIND** (Figure 1). The system rewinds the tape to the beginning and the **MESSAGES** light will be on steady. New messages are then recorded over the old (cleared) messages.

To Play New Messages Only

If you have saved messages and get additional messages, you can choose to play only the new messages.

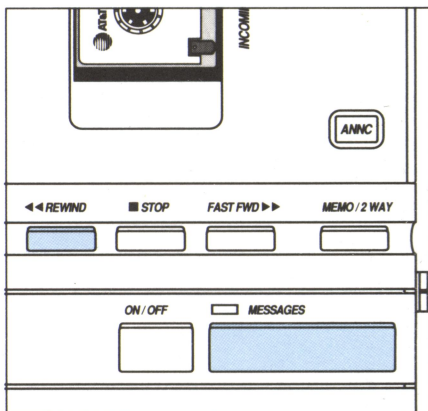

Figure 1

For example, if you have saved 3 messages and then get a new one, the **MESSAGES** light will blink 4 times. To play only the 4th message, hold down **MESSAGES**. When the tape begins to rewind, release **MESSAGES**. The new message will then play, and the system will automatically save all 4 messages.

NOTE: If there are no new messages, the system will beep 5 times rapidly.

At Home Operation *(continued)*

To Interrupt Message Playback

Press and release **(STOP)** (Figure 1).

Press and release **(MESSAGES)** to continue playing messages.

CAUTION: If a call comes in while the system is stopped but still ON, the system will answer the call and record over any remaining messages on the tape. To avoid losing messages after pressing **(STOP)**, immediately press and release **(FAST FWD)** (Figure 1) to advance to the end of messages.

To Rewind the Tape

Hold down **(REWIND)** while the system is playing messages. The tape rewinds as long as you hold down the button (or until you reach the beginning of the tape). To continue playing your messages, release **(REWIND)**.

To rewind the tape after **(STOP)** is pressed, press and release **(REWIND)**. The tape will rewind to the beginning of your messages unless **(STOP)** is pressed again.

To Fast Forward the Tape

Hold down **(FAST FWD)**. The tape advances as long as you hold down the button (or until it reaches the end of your messages). To continue playing your messages, release **(FAST FWD)**.

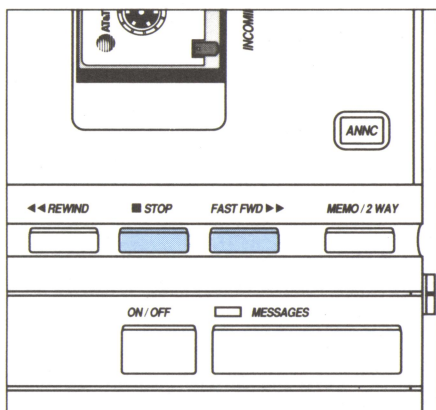

Figure 1

To Replay Old (Cleared) Messages

Even if you have cleared messages, "old" messages remain on the tape until new messages are recorded over them. To replay old messages:

- 1 Press and release **(MESSAGES)** to start playing the tape.
- 2 Hold down **(MESSAGES)** while the tape is playing or during the 5 beeps at the end of message playback. The tape plays as long as you hold **(MESSAGES)**.
- 3 Release **(MESSAGES)** when the old messages that you wanted to hear have been played. The system will beep 5 times and reset to answer calls.

At Home Operation *(continued)*

Screening Your Calls

To screen your calls, set the system to answer calls and adjust the VOLUME control so you can hear a caller's message.

If you decide to take the call, lift the telephone handset of any telephone on the same line and talk to the caller. The system stops recording and will reset to answer calls.

NOTE: If you answer a call and the announcement does not stop right away, press and release the telephone switchhook or **(STOP)**.

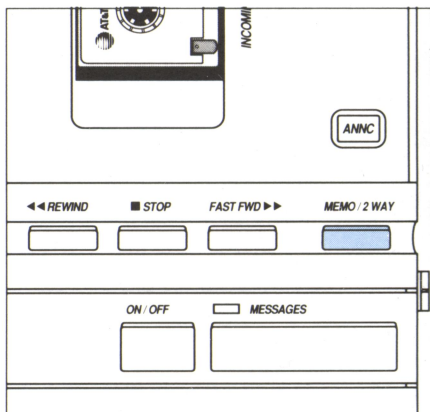

Figure 1

Recording a Telephone Conversation

NOTE: This unit does not sound warning beeps to let the other party know that the call is being recorded. To ensure that you are in compliance with any federal or state regulations regarding recording a telephone call, you should start the recording process and then inform your caller that you are recording the call.

Recording a Memo

A memo is recorded as an incoming message that can be played back at home or from a remote telephone.

- 1 To record:** Hold down **(MEMO/2 WAY)** (Figure 1). When the system beeps, speak toward the system.
- 2 To stop recording:** Release **(MEMO/2 WAY)**.

To play back the memo, follow the instructions under "Listening to Your Messages," page 12.

- 1 To record:** Tap (quickly press and release) **(MEMO/2 WAY)** at any time during a phone conversation. The system beeps once and begins to record.
- 2 To stop recording:** Press and release **(STOP)**.

To play back the recording, follow the instructions under "Listening to Your Messages," page 12.

Remote Operation

Many features of this system can be operated from another telephone line by using the dial pad of any touch tone telephone.

Remote Access Code

Some features, such as turning the system on or leaving a memo, can be accessed immediately after the system answers. To protect your privacy, other features—playing, saving, or clearing messages, for example—require that a Remote Access code be entered before they can be operated from another telephone line.

The Remote Access code is printed on the label under the cassette cover (Figure 1). You cannot change the Remote Access code.

To use your system from another location:

- 1 Dial your telephone number from a touch tone telephone.
- 2 When the system answers, enter your Remote Access code.

If you do not want to hear the announcement, enter your Remote Access code as soon as the announcement begins. If the announcement does not stop, enter the Remote Access code again.

When the Remote Access code is entered correctly, the system will beep twice, indicating that the system is ready for a remote command.

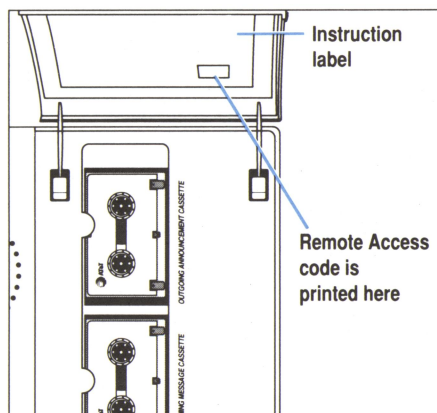

Figure 1

- 3 Follow the instructions for the feature you wish to access. You have approximately 4 seconds to enter a command; otherwise, the system will automatically begin to play your messages. You will hear a series of low blips as the tape rewinds.

NOTE: You must call from a touch tone telephone to enter your Remote Access code and to operate other remote features.

Remote Operation *(continued)*

Listening to Messages

When you dial your number and enter your Remote Access code, the system automatically rewinds to the beginning of messages. You will hear a series of blips as the tape rewinds. The system then plays all messages, beeping once after each message and 5 times after the last message.

To interrupt message playback, press and release **(#)**. You then have 15 seconds in which to enter another command; otherwise, the system hangs up. Press and release **(7)** to resume playing messages.

Options include:

Playing New Messages Only

Wait for your system to present a two-beep signal, then press and release **(6)**. If there are new messages, the system rewinds to the beginning of the first message and begins to play. If there are no new messages, you will hear 5 rapid beeps followed by a two-beep signal. You can either enter another command or hang up.

Replaying All Messages

Wait for your system to present a two-beep signal, then press and release **(7)**. The system replays the messages, and beeps 5 times after the last message is played.

Saving Messages

To save messages you've just heard, simply hang up the telephone. Any new messages will be recorded after the saved messages.

Clearing Messages

Wait for your system to present a two-beep signal, then press and release **(3) (3)**. The tape rewinds and resets so that new messages will be recorded over the old (cleared) messages.

NOTE: If you decide to save the earlier messages, you can still do so if new ones have not yet been recorded over them. Just press and release **(7)** to replay the messages, and then hang up to save them.

Rewinding the Tape

While listening to messages, hold down **(2)** to rewind the tape. The tape rewinds as long as you hold down **(2)**. When you release **(2)**, messages resume playing from that position on the tape.

Advancing the Tape

While listening to messages, hold down **(5)** to advance the tape quickly. The tape advances as long as you hold down **(5)**. When you release **(5)**, messages resume playing from that position on the tape.

Remote Operation *(continued)*

Recording a Memo

This feature is useful if you want to record a memo to yourself or other members of your household while you are away. You can record a memo up to 4 minutes long.

After playing messages:

- 1 Listen to your messages and wait for your system to present a two-beep signal.
- 2 Press and release (*).
- 3 After you hear a single beep, begin to speak.
- 4 When you are finished, press and release (#) or hang up.

When the system is off:

- 1 Dial your telephone number. The system will answer after 10 rings by beeping twice.
- 2 Press and release (*). After you hear a single beep, begin to speak.
- 3 When you are finished, hang up. Your system will now record all incoming messages.

Recording a New Announcement

- 1 Dial your telephone number from a touch tone phone and wait for your system to answer.
- 2 When your announcement begins to play, enter your Remote Access code.
- 3 After you hear two beeps, press and release (4) (*). You will hear a series of low blips as the tape rewinds, followed by a beep to indicate that the system is ready to record.
- 4 Speak into the telephone in a normal tone of voice.
- 5 A few seconds after you finish speaking, the system will beep and then reset. If you do not hear the beep, press and release (#) to reset the system. When you hear 2 beeps, the system is ready for another remote command.
- 6 After the two-beep signal, press and release (4) (1) to review your announcement.

Bypassing Your Announcement

You can bypass your announcement by pressing and releasing (*) when the announcement begins to play. (You may wish to inform frequent callers of this feature.) To leave a message, begin speaking after the beep.

Remote Operation *(continued)*

Turning Your System On/Off

To turn your system on:

You can turn your system on by calling from any touch tone telephone.

- 1 Dial your telephone number. The system answers after 10 rings by beeping twice. (The system will not play your announcement.)
- 2 Press and release **(0)**. The system beeps twice to indicate that it is ready for the next remote command. Enter **(*)** and leave a message or simply hang up.

When you hang up, the system remains on, ready to answer automatically and receive messages.

NOTE: If the system beeps 5 times after you press and release **(0)**, the tape is full.

To turn your system off:

- 1 Dial your telephone number.
- 2 When the system answers, enter your Remote Access code during or after the announcement.
- 3 Wait for the two-beep signal, then press and release **(8) (8)**. The system will not answer incoming calls until you turn it on again.

When the Tape Is Full

When the Message tape is filled with messages, the system will answer after 10 rings by beeping 2 times. It does not play your announcement because it cannot record the caller's message.

You can reset the tape to record over the old messages:

- 1 Enter your Remote Access code within 15 seconds after the beeps to listen to messages.
- 2 Press **(3) (3)** to reset the tape after you have listened to all of your messages.

NOTE: Remember that when you reset the tape, new messages are recorded over the messages you have just heard.

In Case of Difficulty

If your answering system does not work properly, try the following suggestions before seeking repair assistance.

Messages Light Does Not Work

Make sure the power cord is securely plugged into an electrical outlet not controlled by a wall switch. Inspect the connection at the back of the answering system.

You should use only the power cord supplied with your answering system. If you need a replacement, call the AT&T National Sales and Service Center at 1800 222-3111.

Messages Light Flashes Rapidly after Connecting Power Cord

Check to see that the cassettes are installed. If they are not, insert the tapes and press any button. If both tapes are installed, check to see if either tape is broken. If so, replace that tape.

Recording Tape Sticks or Malfunctions

- ☞ Use only high-quality MC-60 microcassette tapes.
- ☞ If the tape has been used for an extended period, it may be worn and should be replaced.
- ☞ The recording heads may be soiled and should be cleaned (see page 21).

Announcement Is Incomplete

Do not pause for more than 4 seconds while recording the announcement. Be sure to hold down **ANNC** when recording your announcement.

Messages Are Incomplete

- ☞ The system can accept messages up to 4 minutes long. If a caller leaves a very long message, part of it may be lost when the system disconnects the call after 4 minutes.
- ☞ If the caller pauses for more than 7 seconds, the system stops recording.

Difficulty Hearing Messages

- ☞ Check the VOLUME control (see page 10).
- ☞ If messages are garbled, the recording heads may be soiled and should be cleaned (see page 21).

In Case of Difficulty *(continued)*

System Does Not Answer After Correct Number of Rings

- ☞ If the Toll Saver feature is in operation, the number of rings changes from 4 to 2 when you have messages waiting (see page 10).
- ☞ The system must reset the tape between calls. This only takes a few seconds. But if you call immediately after the system has answered a call, there may be a delay in answering.
- ☞ If the tape is filled with messages or the system is off, the system answers after 10 rings (see page 18).
- ☞ In some cases, the system may be affected by the ringing system used by the local telephone company.

System Does Not Respond to Remote Commands

- ☞ Make sure you are calling from a touch tone phone. When you dial a number, you should hear tones. If you hear clicks instead, the phone is not a touch tone telephone.
- ☞ Some telephones transmit only one brief tone each time you press a key. If you call your system from such a telephone, all features should work normally except rewind and fast forward.

When using a phone of this kind, the tape will move briefly, then resume playing each time you press and release (2) to repeat or (5) to skip.

NOTE: If you are using one of these telephones, the answering system may not detect your security code while the announcement is playing. Wait until the announcement is over and reenter your security code.

- ☞ There may be noise interference on the phone line you are using. Press dial buttons firmly.
- ☞ Make sure you are entering your security code correctly. Your Remote Access code, set at the factory, is printed on the label under the cassette cover.

Other Problems

Make sure you have followed all the instructions in this manual. If you continue to have problems call the AT&T National Sales and Service Center at 1 800 222-3111. If you cannot correct the problem, disconnect the answering system and refer to the warranty information on page 24.

Maintenance

Although your answering system is designed to be maintenance free, it contains sensitive electronic parts. Treat it with care to assure best performance.

Avoid Rough Treatment

The original packaging should be used for protection if you must ship the system.

Cleaning

The hard plastic casing of your answering system has a durable finish that should retain its original luster for many years. Clean exposed parts with a soft, slightly damp cloth. To remove stains, use a mild soap. Never use detergents, excess water, treated cloths, harsh cleaning agents, or sprays.

Cleaning Recording Heads

To ensure trouble-free operation, you should clean the recording heads periodically.

- 1** Unplug the system from the electrical outlet.
- 2** Remove the microcassette tapes.
- 3** Use **one** of the following methods to clean the recording heads:
 - Use any good tape deck cleaning kit (available in most stores that sell electronic products). Follow the manufacturer's instructions.
 - Rub the front face of the recording heads lightly with a soft, clean cotton swab moistened slightly with isopropyl alcohol.

NOTE: Use any cleaning fluid sparingly. If you spill fluid into the interior, unplug power and line cords and let the system dry thoroughly before using.

Maintenance (continued)

Changing Microcassettes

To change the Incoming Message tape:

- 1 Remove the cassette.
- 2 Turn the cassette over or insert a new cassette.
- 3 Press and release **REWIND** (Figure 1).

To change the Outgoing Announcement tape:

- 1 Remove the cassette.
- 2 Turn the cassette over or insert a new cassette.
- 3 Tap (quickly press and release) **ANNC** (Figure 1), then wait for the tape to reset.
- 4 When the tape stops, record a new announcement (see page 8).

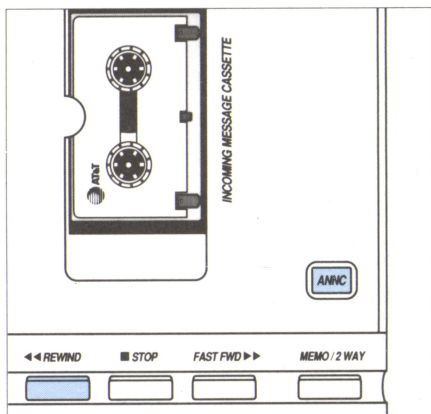

Figure 1

Maintenance (continued)

Power Failure Recovery

In the event of a power failure, the answering system will not operate. After power is restored, the answering system should return to the same status as before the power failure. The MESSAGES light will be on steadily, or blinking if there were messages. If the power was off a long time, the system may lose the message count and blink only once. To listen to any messages, press and release **MESSAGES** (Figure 1).

NOTE: When you first install your unit, you may notice that the system responds as if there had been a power failure, even if there are no messages. Press and release **REWIND** to reset the system.

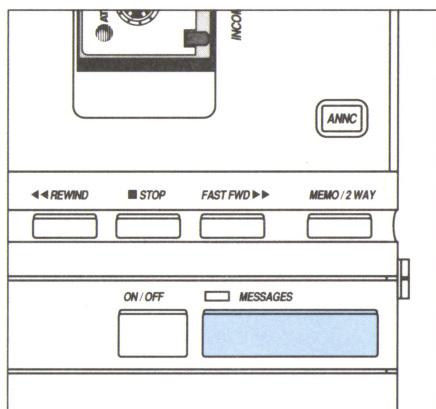

Figure 1

AT&T Limited Warranty

What is covered:

Any defect in materials or workmanship.

For how long:

One year.

What we will do:

If your AT&T product is defective and returned within 30 days of the date it was purchased, we will replace it at no charge to you. If returned after 30 days but within one year of the date of purchase, we will repair it or, at our option, replace it at no charge to you.

If we repair your AT&T product, we may use new or reconditioned replacement parts. If we choose to replace your AT&T product, we may replace it with a new or reconditioned one of the same or similar design. The repair or replacement will be warranted for either (a) 90 days or (b) the remainder of the original one year warranty period, whichever is longer.

Limitations:

Implied warranties, including those of fitness for a particular purpose and merchantability (an unwritten warranty that the product is fit for ordinary use), are limited to one year from the date of purchase. We will not pay for loss of time, inconvenience, loss of use of your AT&T product,

or property damage caused by your AT&T product or its failure to work, or any other incidental or consequential damages.

Some states do not allow limitations on how long an implied warranty lasts or the exclusion or limitation of incidental or consequential damages, so the above exclusions or limitations may not apply to you.

What we ask you to do:

To get warranty service for your AT&T product, you must provide proof of the date of purchase. Within 30 days of the date it was purchased, return your AT&T product to your place of purchase for immediate replacement. After 30 days, call us toll free at 1 800 222-3111 for the address of an authorized service location. If you ship your AT&T product to the authorized service location, you must prepay all shipping costs. We suggest that you retain your original packing material in the event you need to ship your AT&T product. When sending your AT&T product to a service location, include your name, address, phone number, proof of date of purchase, and a description of the operating problem. After repairing or replacing your AT&T product, we will ship it to your home at no cost to you.

Repair or replacement of your AT&T product at an authorized service location is your exclusive remedy.

AT&T Limited Warranty (continued)

What this warranty does not cover:

This warranty does not cover defects resulting from accidents, damage while in transit to our service location, alterations, unauthorized repair, failure to follow instructions, misuse, fire, flood, and acts of God. Nor do we warrant your AT&T product to be compatible with any particular telephone equipment or party line, key telephone systems or more sophisticated customer premises switching systems. If your AT&T product is not covered by our warranty, call us toll free on 1 800 222-3111 for advice whether we will repair your AT&T product and for other repair information, including charges. We, at our option, may replace rather than repair your AT&T product with a new or reconditioned one of the same or similar design. The repair or replacement will be warranted for 90 days.

This warranty is the only one we give on your AT&T product, and it sets forth all our responsibilities regarding your AT&T product. There are no other express warranties.

State Law Rights:

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

FCC Registration and Repair Information

Your new AT&T product has been registered with the Federal Communications Commission (FCC). This product complies with standards in Part 68 of the FCC Rules. The FCC requires us to provide you with the following information:

1 Connection and use with the nationwide telephone network

The FCC requires that you connect your product to the nationwide telephone network through a modular telephone outlet or jack. The modular telephone outlet or jack to which the telephone must be connected is a USOC RJ-11C or RJ-11W.

This equipment may not be used with Party Line Service or with Coin Telephone Lines.

2 Notification to the telephone company

The FCC requires that upon request of your local telephone company, you provide the following information:

- A** The "line" to which you will connect the telephone equipment (that is, your phone number), and

- B** The telephone equipment's FCC registration number and ringer equivalence number (REN). These numbers are on the back or bottom of your telephone equipment.

The REN is useful to determine how many devices you may connect to your telephone line and still have them ring when your telephone line is called. In most, but not all areas, the sum of all REN's should be 5 or less. You may want to contact your local telephone company.

3 Repair instructions

If it is determined that your telephone equipment is malfunctioning, the FCC requires that it not be used and that it be unplugged from the modular outlet until the problem has been corrected. Repairs to this telephone equipment can only be made by the manufacturer or its authorized agents or by others who may be authorized by the FCC. For repair procedures, follow the instructions outlined under the AT&T Limited Warranty.

FCC Registration and Repair Information

4 Rights of the telephone company

If your product is causing harm to the telephone network, the telephone company may temporarily discontinue your telephone service. If possible, they'll notify you before they interrupt service. If advance notice isn't practical, you'll be notified as soon as possible. You'll be given the opportunity to correct the problem, and you'll be informed of your right to file a complaint with the FCC.

Your telephone company may make changes in its facilities, equipment, operations, or procedures that could affect the proper functioning of your AT&T product. If such changes are planned, you'll be notified.

Interference Information: Part 15 of FCC Rules

Some telephone equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used properly, may cause interference to radio and television reception.

Your AT&T product has been tested and found to meet the standards for a Class B digital device, as specified in Part 15 of the FCC Rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

If your AT&T product causes interference to radio or television reception when it's in use, you might correct the interference with any one or all of these measures:

- 1 Where it can be done safely, re-orient the receiving television or radio antenna.
- 2 To the extent possible, relocate the television, radio, or other receiver with respect to the telephone equipment.
- 3 If your telephone product runs on AC power, plug your product into an AC outlet that's not on the same circuit as one used by your radio or television.

If you need assistance, you can call our National Sales and Service Center at 1 800 222-3111.
